

The Atlas Copco logo is positioned in the top right corner of the page. It consists of the company name "Atlas Copco" in a white, italicized serif font, centered between two horizontal white bars. The background of the logo is a solid teal color.A technical drawing of a light tower is overlaid on a teal triangular graphic in the bottom left corner. The drawing shows a top-down view of the tower's base and a side view of the mast. It includes various dimension lines and labels such as "1630 (64.2)", "1390 (54.7)", "C-C (1.9)", "Ø270", "Ø225", "Ø22", "120", "105", "10.5", "14.8", "30.8", "18.5", and "10.5".

Your site, your light

The HiLight range of light towers

Efficient temporary lighting for improved productivity

The HiLight range offers you a wide variety of choices, so you can choose the right lighting tower for your application. We supply to a multiple range of industries with a flexible and dynamic approach to operations, addressing efficiency and safety on site. You can also be assured of the robust build quality and compact size for which Atlas Copco is globally recognized.

We have really put our innovation stamp on LED technology. The lenses in our LED light towers have a very special optic designed specifically for the toughest and most demanding conditions.

This innovative, fully directional, LED lens design means we maximize the light coverage and reduce “lighting waste”. A single HiLight tower can cover an area of up to 6.000 m² with a with an average of 20 luxes of brightness —ensuring a brighter, safer and more productive site.

HiLight provides you with a full portfolio of innovative and easy-to-use light towers for an energy-efficient light coverage that will help you boost your operational productivity while meeting environmental and safety standards.

Building a brighter future with solar energy

The HiLight S2+ uses solar radiation as an energy source, providing silent and cleaner operations in construction projects, mining, oil and gas, and event sites.

HiLight BI+ 4

Where autonomy meets efficiency

The innovative light tower incorporates state-of-the-art surface mount device (SMD) LED lighting technology and lithium-ion batteries to provide excellent performance and efficiency. It will enable you to reduce carbon footprint and operating costs while improving sustainability levels –both environmentally and in business.

Combining the use of lithium-ion batteries with a low-consumption Stage V diesel engine, the new HiLight BI+ 4 light tower offers users maximum flexibility as it has four operating modes. When running solely on the batteries, it provides you with up to 19 hours of silent and emission-free operations. And, in hybrid mode, it offers the lowest average fuel consumption in its class with 0,29l/h. Thanks to the incorporation of a battery, you can reduce up to seven tonnes of CO2 per unit, per year.

With a 60% reduction in engine runtime, service intervals are three times longer than light towers that run solely on diesel. The HiLight BI+ 4 requires minimal maintenance every 1,500 hours of lighting, so users can save on costs associated with servicing.

The HiLight BI+ 4 has four floodlights providing 150W power to reliably cover 4,000m². With a fully hydraulic mast lifting and electric mast rotation, it is 15% lighter than any other hybrid light tower and you can fit up to 22 units on a standard 13-metre Eurotruck.

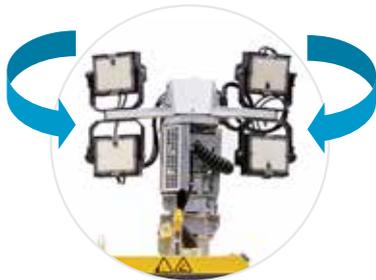

New

SMD LED floodlights

The **HiLight BI+ 4** offers maximum flexibility with four operating modes: it can be powered directly from mains electricity, from its lithium-ion batteries, from its diesel engine, or from a hybrid setting to make the most of the energy available.

HiLight S2+

Solar-powered light tower

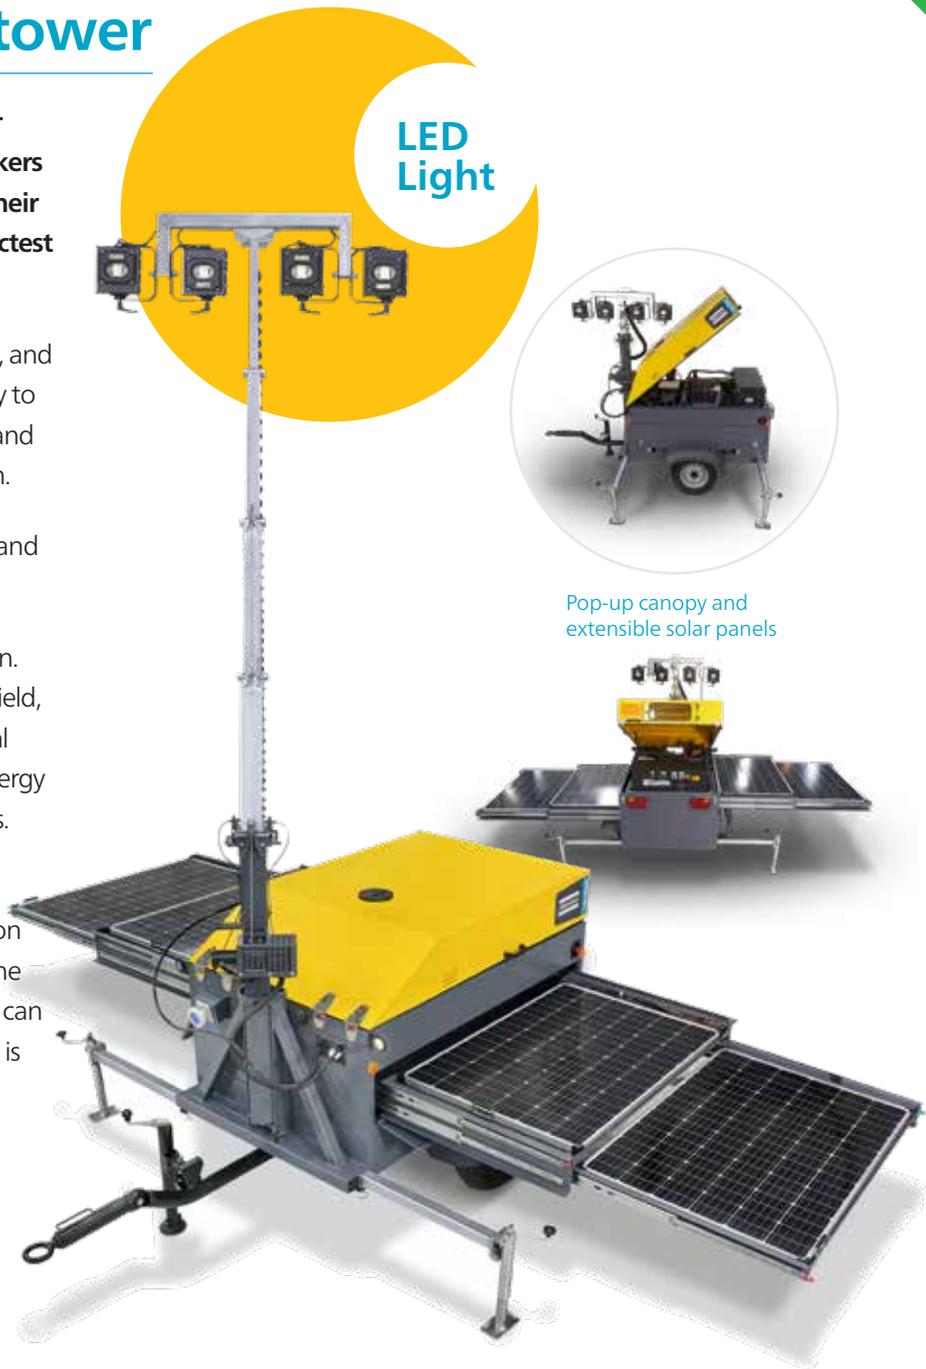

This user friendly solar-powered LED light tower delivers efficient, high performance, giving workers good visibility, while allowing sites to increase their level of sustainability by complying with the strictest emission and noise regulations.

The HiLight S2+ delivers 2.000 m² of light coverage, and it can be moved around and its solar panels are easy to set up; they are simply pulled out from the canopy and can be adjusted to best align with the sun's position.

The HiLight S2+ features an external control panel, and dimming function to increase autonomy efficiency.

The solar light tower provides autonomous operation. In cases where energy demand is higher than solar yield, the light tower can also be charged with any external power grid. Batteries can be recharged with solar energy in 8 hours or an external power source in just 3 hours.

This light tower offers a robust alternative for end users and rental companies operating in construction projects, mining, oil and gas and event sites. Since the unit works at temperatures from -5°C to +50°C and can operate reliably at high altitude without derating, it is also ideal for remote work sites.

HiLight B6+

The smart light tower

The ultra-quiet LED light tower HiLight B6+ has been designed to be seen and not heard while ensuring maximum safety on site.

Delivering operating noise levels as low as 55 dBA, the renewed version of the HiLight B6+ light tower is ideally suited to provide illumination at events, temporary public lighting or enhanced visibility at construction sites located near residential areas.

The unit is user-friendly and highly intuitive, so no specific knowledge is needed to install and operate the equipment. Dimmable LED floodlights can be adjusted to meet changing needs, while compact dimensions enhance transport economy and low maintenance requirements reduce servicing cost. All of these features combine with the market-leading capabilities of the HiLight B6+ light tower to provide a highly effective, flexible and energy-efficient lighting solution.

HiLight H6+

More than meets the eye

This light tower offers low operational costs and reduced noise levels while increasing illumination coverage. It is ideal for tough environments, such as mining and construction applications, as well as for the rental industry.

The HiLight H6+ comes with the innovative **HardHat® body**, made of medium-density polyethylene rather than metal, to protect the working components underneath from the elements. The HardHat® is **resistant to corrosion**, lightweight, crack-resistant and better able to meet the critical demands of on-site use.

It features a new generation of LED floodlights that are more efficient and provide optimal light distribution with an illumination area of up to 6.000 m² and a life expectancy of 50.000 hours. To offer the right luminosity at each moment and increased autonomy, the HiLight H6+ comes with a dimming function on the easy-to-use control panel, located in an exterior lateral of the light tower.

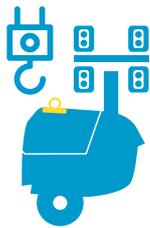

Maintenance and transport efficiency were a priority when designing the HiLight H6+. On the first front, the light tower only requires a **simple service** after 600 hours of operation which can be carried out in 40 minutes.

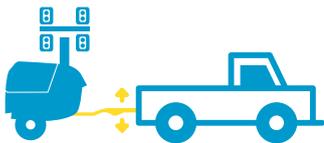

The new **HiLight H6+** can be transported in three different ways. It has an integrated lifting point, four forklift slots and three different tow bars to choose. The adjustable tow bar provides **flexibility**, as it allows users to handle and transport the HiLight H6+ easily while towing with vans, trucks, and pick-ups.

HiLight V4+ and HiLight V5+

The HiLight V4+ and the HiLight V5+ include a HardHat® canopy as standard, which ensures maximum protection of internal parts. This range of light towers is suited for multiple drop rental applications and provides users with a **robust and easy-to-transport set of lighting options that match any site requirements**. Thanks to its compact dimensions, 16 units can be loaded on a 13-metre truck. The extended safety features also guarantee the protection of bulbs during transportation.

HiLight V4 and V4W

The HiLight V4 offers increased serviceability with wide wing doors and all components easily accessible. Environmental considerations have also been taken into account, with a frame design that prevents oil, fluids and fuel from leaking out and contaminating the ground.

The HiLight V4W offers the best performance at **high altitudes and in the most extreme environments** — thanks to **its 8kW engine**. In addition, the larger fuel tank and low fuel consumption allow longer run times between refueling. The HardHat® canopy ensures maximum protection of internal parts.

HiLight E3+

Electric light tower with HardHat®

E-LED

The renewed HiLight E3+, operates reliably throughout the most demanding conditions found at construction sites, outdoor events and temporary public lighting installations. Its internal electronics, control panel and connectors are protected from the elements by the innovative HardHat® canopy, while the complete assembly, which includes a heavy-duty 7 metre mast, has a certified wind stability of 100 km/h. **Easy to plug into any power source including auxiliary power, power generators, energy storage systems or directly into the grid.**

With no mechanical parts to maintain, and no liquids, this light tower helps operators to reduce their noise and carbon emissions with a positive impact in the level of productivity on site.

HiLight PS 3

Battery-based

The new HiLight PS 3 offers 3.000 square meters of light coverage with an average of 20 luxes of intensity. It features four 120-watts SMD LED floodlights with a lifespan of 50.000 hours. **Designed to be powered by a ZBP 2000 energy storage system, it comes with two 200-watts foldable solar panels and it can also be fed by an external power source.**

With a compact design for improved transport efficiency, the HiLight PS 3 is light and built to last. It stands winds of up to 50 km/h without straps or fixing systems, and IP67 and IK10-certified floodlights.
